File & Folder Encryption Secure Document Encryption

Encrypted Files & Folders Secure Documents

Encrypted Files and Folders provide organizations with the power to enforce document encryption for all confidential information, whether it resides on a laptop or network drive.

Secure access to these encrypted documents can then be shared with individuals or groups across the organization without compromising privacy policies and procedures.

Strict security measures are put in place to ensure that unauthorized activity, such as copying a file to a USB key, is prevented and the user is notified by a "restricted" pop up message.

How it Works

Encrypted Files and Folders provides a simple DLP (Data Leakage Protection) functionality which allows the user to control the flow of files from the desktop to a USB device.

The movement of files from desktop to the USB device can be restricted completely, or policies can be set for the user when logged into the system. In the event that a file is copied off a device, the encryption is always present and decryption cannot occur without the user's password.

For example: Before copying a file is allowed, the user must be logged into the system. If they are not logged in they must provide an access password for the copy function to be completed.

Administration Console

The administrator can use the Administration Console to set, review and customize an organization's privacy policies; ensuring confidential content is automatically encrypted.

For example, policies can be set to:

- Automatically encrypt data on an employee's computer
- Encrypt all office documents

The administrator can also use the console to add and remove users, as well as set policies to:

- Encrypt by folder e.g. "my documents"
- Encrypt by file types e.g. .pptx, .docx, .xlsx
- Exclude file types so they are never encrypted e.g. .mp3 or .wma
- Prevent documents from being copied without password authorization to USB devices

Highlights

- Enforces document encryption whether it resides on a laptop or on the company network
- Easily shares access of encrypted documents
- Controls the flow of files from desktop to USB device
- Helps organizations meet compliance regulations
- Provides Administration console for managing policies and procedures
- Supports industry standard encryption

Encrypted Files & Folders

Secure Documents

Technical Specs

Administration Console

Operating System

- Microsoft Windows 7 32-bit / 64 bit
- Microsoft Windows Vista 32-bit / 64 bit
- Microsoft Windows XP 32-bit
- Microsoft Windows 2000
- For Windows Vista, XP and 2000, you are required to have administrative privileges.

Web Browser

- Microsoft Internet Explorer 6.0 or above

Internet Connection

- LAN-based using standard TCP/IP DSL, ADSL, Cable Modem

Computer Hardware

- 5-10 MB of hard drive space
- Pentium 233 MHz or greater
- 128 MB RAM or greater

Encrypted Files & Folders

Operating System

- Microsoft™ Windows® 7 32-bit and 64-bit (Recommended)
- Microsoft™ Windows® Vista 32-bit with Service Pack 2 or higher
- Microsoft™ Windows® Vista 64-bit with Service Pack 2 or higher
- Microsoft™ Windows® XP 32-bit with Service Pack 3 or higher

Web Browser

- Internet Explorer 6.0 or above

Internet Connection

- Minimum 56 Kbps dial-up modem
- LAN-based using standard TCP/IP
- DSL, ADSL, Cable Modem

Computer Hardware

- 5-10 MB of free hard drive space
- Pentium 1.6 Ghz or greater
- 512 MB RAM or greater
- NTFS, FAT32, Unix (shared network folder only), Linux (shared network folder only)

Supported Network

File Shares

- NTFS, CIFS support

Supported Languages

6.4 Supported Languages

- English
- French (Canadian)

ABOUT ECHOWORX™

Leading Provider of Encryption Software

Echoworx is a leading provider of managed encryption services to protect confidential information from unauthorized viewers and makes the encryption of digital information easy. Echoworx' complete encryption strategy for privacy encompasses much more than just data loss prevention. It protects all forms of disparate email data, whether on mobile devices, desktops, in the cloud or on exchange servers.

Echoworx is Deloitte, Microsoft, CCTM and PCI certified. As a SaaS (software as a service) model; is built on best-of-breed technology. Echoworx is the encryption service provider of choice for leading security software and telecommunications and hosted exchange providers, including BT Global Services, Symantec Hosted Services, AT&T, McAfee, Verizon, and Apptix among other global businesses.
