

9 WAYS

to prevent information security incidents

Vast volumes of confidential information including loans, health records, financial statements, investment transactions, and credit card numbers pass through business networks every day. That's why you need a 100% focused solution to ensure that confidential communication, across your organization, is protected.

RAMP UP ENCRYPTION THROUGHPUT AND SPEED

By employing a very clever and simple method of prioritizing both user initiated email and application initiated email so that volume delays are non-existent, Echoworx encryption platform drastically improves your ability to reach customers and business partners.

SECURITY CHALLENGE
HIGH VOLUME DIGITAL STATEMENTS

REDUCE ONBOARDING TIME

Application forms are easily secured using Echoworx and completed in days versus weeks – significantly reducing your document handling costs and the risks of regulatory non-compliance.

SECURITY CHALLENGE
EFFICIENT DIGITAL ONBOARDING

PROVIDE WIDE RANGE OF DELIVERY OPTIONS

To ensure that any sensitive email you send, for a wide range of reasons, never goes to a recipient unencrypted, our platform offers eight different encryption delivery methods to accommodate all your business scenarios - Web Portal, S/MIME, PGP, PDF, Attachment (PDF, Office and ZIP) as well as TLS with fallback.

SECURITY CHALLENGE
PROTECTING B2B AND B2C COMMUNICATIONS

PERSONALIZE THE USER EXPERIENCE

By applying branding and 27 language preferences to your encrypted email, on a message by message basis, we accommodate multiple logos across your organization - ensuring recipients trust.

SECURITY CHALLENGE
MANAGING MULTIPLE BRANDS AND LANGUAGES

LEVERAGE EXISTING PORTAL

Full support of Single Sign On, for authentication and access to your secure email, removes the registration process for customers completely – Echoworx provides a seamless user experience while enforcing security policies and driving adoption.

SECURITY CHALLENGE
HANDLING PASSWORD OVERLOAD

TRANSFER PGP EMAIL TO THE CLOUD

Migrating and eliminating an on-premise PGP environment, including bulk key creation and certificate management, is accomplished simply and transparently, with Echoworx, without installation of software on any desktop - handling all the intricacies of PGP automatically in a fully scalable environment.

SECURITY CHALLENGE
MIGRATING LEGACY SYSTEMS

UNBLOCK SENSITIVE INCOMING EMAILS

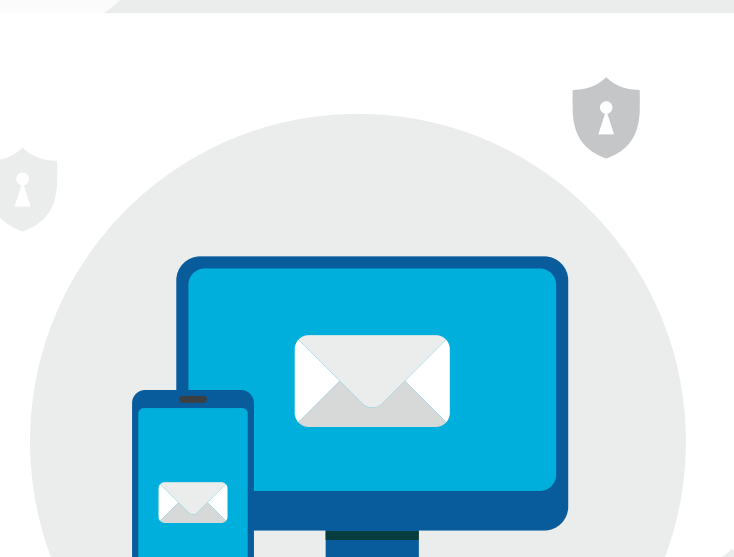

Incoming sensitive messages are automatically routed to Echoworx and can be encrypted as they arrive in multiple ways - maintaining compliance and enabling the exchange of incoming sensitive information.

SECURITY CHALLENGE
ENABLING INBOUND SENSITIVE INFORMATION

GIVE USERS CONTROL OVER ENCRYPTION

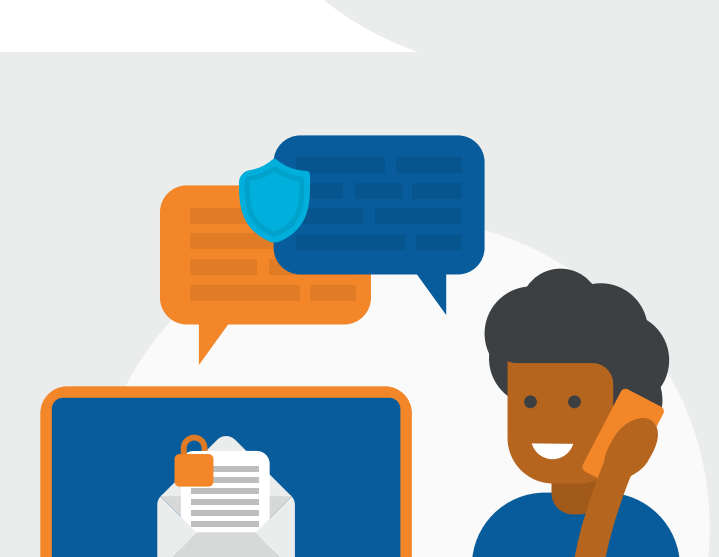

Offering the same sender encryption options and notifications available on the desktop to users in Office 365 Outlook on the web is easily achieved since our platform integrates with a host of solutions including Office365 - making each experience unique to the user.

SECURITY CHALLENGE
PRESERVING MOBILE AND DESKTOP EXPERIENCES

OFFER MORE WAYS TO AUTHENTICATE

With Echoworx you can eliminate any registration process completely - or dial-up authentication for more secure security - full OAuth Access, Self-Registration, Shared Secret Passphrase, SSO, System Generated Verification Codes and Multi-Factor Authentication.

SECURITY CHALLENGE
MANAGING USER EXPERIENCE

At Echoworx, we believe that protecting people's privacy is the right thing to do for business and for the world. And by balancing security and compliance with user experience we're providing an adaptive, fully flexible approach to your secure communications that works everywhere, on every device, to meet the needs of even the most complex organization. And, all backed up by a proven ROI model.
