

Echoworx and Proofpoint

Secure Comms. Zero Compromise.

Key Benefits

- **Cryptography Key Management:** Comply with cutting-edge cryptographic standards, including quantum-resistant plans. Leverage cloud-based Hardware Security Modules (HSMs) to guard against offline attacks. Add resilience with MYOK (Manage Your Own Key) for maximum security.
- **Authentication Access (AAA):** Simplify secure access with options like OAuth social login, out-of-band verification, Passkeys, SMS authentication, 2FA, and self-service password resets. Seamlessly integrate with portals (OpenID) and platforms like WhatsApp.
- **Audit & Tracking:** Enhance audit functionality with flexible log management and customizable controls. Integrate API keys with SIEM systems for real-time reporting and compliance insights.
- **Secure Delivery:** Enable secure messaging with TLS fallback, encrypted PDFs, secure attachments, auto-generated S/MIME, and cloud-based PGP. Automate encryption via domain, policy, or user actions for hassle-free protection.
- **Brand Protection:** Strengthen your brand with vanity domains, BIMi, templates, and automated branding. Maintain consistent visuals and messaging across notifications and devices, supporting multilingual content and dynamic logos.
- **Capacity & Scalability:** Handle high-volume communications with elastic scaling, load balancing, and bulk message management. Managed services ensure encryption aligns with customer SLAs, offering reliability at scale.
- **User Experience:** Provide an intuitive, seamless experience with customizable interfaces, enhanced accessibility, and self-service options. Tailor services for users of all skill levels to ensure ease and satisfaction.

Adopting new systems or switching between devices is often met with resistance—both from employees and customers. It's understandable. People prefer simplicity and familiarity. What organizations really want is a seamless experience: intuitive interfaces, customizable features, and tools accessible to all skill levels. Take email, for example.

A truly user-friendly email service doesn't just work—it integrates effortlessly into existing systems. It's secure, offering encryption that goes beyond standard TLS to protect content and attachments. It empowers users through self-management while delivering the peace of mind that sensitive information stays protected.

Integrated Solution

Here's the deal: Enterprise email security is messy, high-stakes, and absolutely non-negotiable. That's where the Echoworx + Proofpoint integration changes the game. This powerful, advanced solution combines seamless encryption with enterprise-grade resilience—security that doesn't flinch under pressure.

Think advanced encryption that safeguards your data, intuitive user experiences that simplify workflows, and

scalable tools designed to meet the demands of high-security enterprises. This isn't just about secure emails. It's about enabling secure, efficient communication across your organization. Proofpoint and Echoworx deliver security that fuels growth, protects your business, and drives adoption.

Because when security is powerful and seamless, businesses thrive.

Proofpoint + Echoworx: Customer Use Cases

Enhanced Message Access: Modern authentication methods like biometrics or SMS enable swift and secure access to messages and statements.

Streamlined Key Management: Replace outdated on-premises PGP and S/MIME systems with a more efficient, modern approach to encryption.

Enhanced Security for Shared Mailboxes: Simplify and speed up secure document transmission for shared mailbox environments.

Automated Security Measures: Support a seamless transition to paperless operations with automated, self-service attachment encryption.

Branding Enhancement Service: Create a unique visual identity to strengthen customer relationships and stand out from competitors.

Scalable Secure Message Delivery: Easily deliver millions of secure statements, ensuring reliable and scalable business mail operations.
